

Technical Bulletin: Wilsonart[®] Quartz

Product/Design: *SERENE/Q1001* Date/Revision: 9/30/2015

Serene – Q1001 is a bright white quartz countertop design unhindered by pattern or veining offering a luxurious look for a contemporary feel. Serene quartz is a surfacing product made mostly of natural quartz materials available in a polished finish. It is important to remember that variation in the natural stones that make up Wilsonart Quartz is to be expected and is not considered a defect. This includes variations in shade, shape, size, color and pattern of quartz aggregate within this design. Equally important is that these variations will have no impact on product performance.

Small black or other color quartz inclusions are inherent of this bright white natural quartz product and should be considered during the layout process of the application. This is normal and to be expected from a natural product like quartz.

Samples are very small select cuts from a slab. They do not represent all the attributes of a design and may not represent small black or other color quartz inclusions. A sample cannot be fully representative of any final installation. If there is any concern of a difference between sample and slab, a full slab should be inspected to fully visualize a design.

Slabs should always be inspected for visual capability before fabrication. If there is ever any question about the suitability of a slab, action such as an exchange must be taken before any part of the slab has been fabricated or responsibility for repair or replacement will fall solely on the purchaser of the slab.
